**Accord Software releases Centerline Mobile, Version 2**

Concord, ON – Accord Software, a developer of advanced transportation management solutions for the trucking industry has released Version 2 of its proven software for mobile handheld computers designed to keep TL, LTL and courier drivers in touch with central dispatch operations at all times.

In conjunction with Centerline TMS, Centerline Mobile Version 2 offers pinpoint GPS positioning, real-time reporting, optimized communications protocols, and an enhanced user interface. The new Advanced Pickup Mode allows drivers to capture detailed information at pickup that was not available at the time of dispatch.

The Advanced Pickup Mode allows drivers to use the optional barcode scanner to capture probill numbers, and validate or update shipment details. This detailed pickup information gives load planners enhanced visibility to more accurately forecast local, linehaul, and interline requirements, prior to the freight arriving at the dock.

“Centerline Mobile is the driver’s interface to Centerline TMS that allows carriers to reap the benefits of true real-time visibility and enhanced operational performance” says Tony De Feo, President of Accord Software. “Centerline Mobile puts the power of Centerline TMS in the palm of a driver’s hand.”

Using the optional RFID and imaging features can further drive business efficiency by eliminating data entry errors and reducing data entry time. Centerline Mobile allows for the electronic capture of OSD details at the time of delivery, minimizing claims-related issues. This enhanced accuracy enables Centerline TMS users to improve customer service and on-time deliveries.

“The new user interface in Centerline Mobile Version 2 is simple and intuitive, making it easy for drivers to use” says Dan Schachtler, Vice President of Business Development. “Designed to improve productivity and eliminate errors, the interface uses a ‘point and click’ approach with menus that can be customized with entries specific to your business.”

**About Accord Software Inc.**

Accord Software is a leading provider of advanced software solutions for the trucking industry. Centerline™, Transportation Management Software (TMS), provides a broad range of integrated modules that can be tailored to the unique ways courier, LTL, TL carriers operate resulting in improved efficiency and effectiveness, reduced operating costs and increased profitability.
