

For Immediate Release

## **Accord Software integrates PC\*Miler 23 from ALK Technologies**

Concord, ON – March 29, 2010

Accord Software today announced the successful certification and integration of PC\*MILER® 23 with its Centerline Transportation Management System® (TMS). The twenty-third annual edition of PC\*MILER provides carriers unprecedented access to critical load planning data, and road restrictions. Centerline TMS, in conjunction with PC\*MILER 23, allows logistics managers to better control their operating costs, enabling greater accuracy in billing, invoicing, and driver settlement. Enhanced map functionality including road restrictions, dangerous goods restrictions, and weight allowances lets users enter height, length, and weight values for loads, calculating the optimum route based on user-selectable criteria.

The integration of PC\*Miler 23 allows Centerline TMS to leverage key mileage calculations from PC Miler to optimize routes, determine mileage between stops, compute mileage for driver pay, and calculate in-state or in-province mileage for fuel tax reporting. “The integration of PC\*MILER 23 with Centerline TMS makes trucking more efficient, offering benefits to shippers, carriers, and strategic partners. Integrating PC\*MILER 23 allows dispatchers to consistently respond to their customers faster” says Tony De Feo, president of Accord Software.

Centerline TMS allows the location of key resources, including trucks and trailers to be plotted on maps in real time. Once resources have been located, plotting pickup and delivery locations allows you to identify which resources are best positioned to respond.

The integration of Centerline TMS with PC\*Miler 23 provides substantial map data updates, including new and updated truck-restricted roadways, North American hazardous materials restrictions, and new weight allowances nationwide.

### **About Accord Software Inc.**

Accord Software is a leading provider of advanced software solutions for the trucking industry. Centerline™ Transportation Management Software (TMS) provides a broad range of integrated modules that can be tailored to the unique ways courier, LTL, TL carriers operate, resulting in improved efficiency and effectiveness, reduced operating costs and increased profitability. Centerline’s comprehensive suite of tools automates the entire business process and streamlines critical business activities such as: Order Entry, Dispatch (GPS/AVL), Cross-Dock, Rating, Driver Settlement, Accounting and many more.
